DETAILED ACTION

This communication is in response to amendment received on 8/18/08.

Claims 1 – 10 are presented for examination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 – 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Lin (200600007317).

As to claims 1 – 8, Lin discloses method for displaying remote images comprising imager (121) which takes an image; communicator (17, 14) which transmits/receives a signal to/from at least one external imaging apparatus; displayer which displays an image; image compositor which makes the displayer concurrently present, in a composite manner, the image taken by the imager, and at least one image respectively taken by and transmitted from each of at least a part of the at least one external imaging apparatus and received by the communicator (fig. 1); image selector which selects a desired image among the image taken by the imager and the at least one received

image (1 - 8); and recorder which records, in a recording medium, a signal of the image selected by the image selector (Note Abstract).

As to claim 9, Lin discloses method for displaying remote images comprising image receiver (121) which receives a signal of each of a plurality of images including at least one image respectively taken by and transmitted from at least one external imaging apparatus; composite image generator (14, 17) which generates a composite image where the inputted image and the at least one image received by the image receiver are concurrently presented (161) on the displayer in a composite manner; image selector which selects a desired image among the inputted image and the at least one received image (1 - 8); and recorder which records a signal of the image selected by the image selector (Fig. 1 and Note Abstract).

As to claim 10, Lin discloses method for displaying remote images comprising transmitting a signal (121) of an image taken by the each imaging apparatus to at least one of the other imaging apparatus, and receiving at least one signal of a respective image or images respectively taken by at least a part of the other imaging apparatuses; compositing the image taken (14) by the each imaging apparatus, and the at least one image respectively received from the at least a part of the other imaging apparatuses, to concurrently present the image (161) taken by the each imaging apparatus and the at least one received image on a screen; and selecting a desired image (1 - 8) from the image taken by the each imaging apparatus and the at least one image taken by each of the at least a part of the other imaging apparatuses, and recording the signal of the selected image (Fig. 1 and Note Abstract).

Response to Arguments

Applicant's arguments with respect to claims 1 - 10 have been considered but are moot in view of the new ground(s) of rejection.
